| CONSTRUCTION STATUS OF SOVIET SINGLE SILO ICBM SITES | |
| | 25) |
| Relatively poor quality photography, combined with heavy snow cover during precluded the effective use of and and for the analysis of construction progress at Soviet single silo complexes. Nevertheless, fourteen probable, possible, and suspect Type III-C ICBM sites were identified at Imeni Gastello, Zhangiz Tobe, and Dombarovskiy. In addition a probable new group of Type III-D ICBM sites at Tatishchevo, and a possible complex command control center adjacent to the transfer point at Drovyannaya, were identified. Suspect activity 20 nautical miles southeast of the latter complex may indicate expansion in that direction, but the large distance between this activity and the known groups tends to cast doubt on this possibility. | 25) |

For some time there has been speculation as to why Launch Site K-3, Tyuratam Missile Test Center was not utilized as the control site for the "L" group. From its location, the construction of Launch Site L-1 appeared to be an unnecessary duplication of facilities since it is situated only a short distance from Site K-3. The identification of an additional control site near the transfer point at some of the deployed complexes offers a possible explanation to the Tyuratam situation, i.e., that for training and/or system developmental purposes, it was desirable to duplicate at Tyuratam the command structure found at the deployed complexes.

It is also interesting to note that after more than two years of deployment, the number of confirmed and probable Type III-C and Type III-D launch groups identified now both stand at seventeen (if only two groups are counted at Perm). In this sense, both deployment programs are proceeding at a parallel pace.

A formidable number of problems remain to be resolved at all of the single silo complexes on future coverage. Among these are:

- 1. The evaluation of suspect activity at Svobodny.
- 2. The identification of "L"-shaped interferometers at Drovyannaya, Perm, and Gladkaya, where none have yet been seen.
- 3. The identification of several control sites at Perm, Gladkaya, and Tatishchevo.
 - 4. The determination of the site grouping at Perm.
 - 5. The possible appearance of control sites near all transfer points.

CIA IMAGERY ANALYSIS DIVISION

| | - 1 |
|--------------|-----|
| CIA/PIR-6111 | O. |

- 6. The confirmation of 30 Type III-D sites and 19 Type III-C sites in the probable, possible, or suspect categories.
- 7. The identification of 17 Type III-D sites and 5 Type III-C sites to fill existing probable or confirmed groups.
- 8. The determination as to whether or not the earlier Type III-D groups at Olovyannaya, Perm, Gladkaya, and Tatishchevo, and certain Type III-C sites have been completed.
- 9. An explanation for the anomalous orientations of Launch Site L-2 (150 degrees) and L-3 (280 degrees), Tyuratam Missile Test Center.
- 10. A determination of the function of a small building which is now being added to each site of the "L" group, Tyuratam Missile Test Center. This building is placed consistently approximately 100 feet from the silo and approximately 45 degrees to the left of the level access road.

The total single silo count through _______ is given below. This reflects a 30 percent increase in total deployed ICBM launch sites and a 20 percent increase in total deployed ICBM launchers since

| ICBM Type | Confirmed | Probable | Possible | Suspect |
|-----------|-------------|----------|----------|---------|
| III-C | 79 | 8 | 5 | 6 |
| III-D | 12 5 | 11 | 11 | 8 |

Construction status sheets for the appropriate complexes are appended. Also included are definitions of the construction stages used by IAD in preparing reports (Figure 1).

FIGURE 1

SINGLE SILO CONSTRUCTION STAGES

TYPE III-C

| STAGE | DESCRIPTION |
|---------|--|
| NEG | Site construction not yet started |
| I | Clearing and grading |
| II | Open cut excavation |
| III | Coring visible |
| IVa | Ramps/forms under construction for silo |
| IVb | Clearing and excavation for guidance and control |
| V | Silo per se finished (to surface level) |
| VIa | Backfill silo |
| VIb | Control and guidance under construction |
| VII | Silo door installed |
| VIII | Control and guidance finished |
| IX | Final backfill and grading (final signature) |
| ID ONLY | Site can be located but construction details are not discernible |

TYPE III-D

| NEG | Site construction not yet started |
|------|---|
| I | Clearing and grading |
| II | Open cut excavation |
| III | Coring visible |
| IVa | Ramps/forms under construction for silo |
| IVb | Clearing and excavation for guidance and control |
| Λ | Silo per se finished (to surface level) |
| VIa | Installation of rail-like objects |
| VIb | Guidance/control under construction |
| VII | Road pattern well-defined, environmental cover often visible over silo |
| VIII | Guidance/control completed |
| IX | Level access road complete, surfacing of road and installation of silo door |
| X | Site complete |
